Operating data note	For storage, mounting and operation of lead-acid batteries, the relevant

	DIN/VDE regulations or country-specific regulations (e.g. VDE 0510 Pa 2/EN 50272-2) must be observed. You must ensure that the battery site is sufficiently ventilated. Possible sources of ignition must be at least 50 cm away.
ambient temperature	
 during operation 	-15 +50 °C
 during transport 	-20 +50 °C
during storage	-20 +40 °C
relative temporary capacity loss at 20 °C in a month typical	3 %
Service life	
service life of energy storage	
• typical	capacity falls to 80 % of original capacity (according to EUROBAT)
at 20 °C typical	4 y
• at 30 °C typical	2 y
• at 40 °C typical	1 y
• at 50 °C typical	0.5 y
ambient temperature during storage	Along with the storage and operating temperature, other factors such a the duration of the storage period and the charge status during storage have a decisive influence on the possible useful life. Batteries should therefore be stored as briefly as possible, always fully charged, and within the temperature range 0 to +20 °C.
