# SP100 Series Solar Pump Controller

## Social—Green and low-carbon

The new generation SP100 intelligent high IP degree solar water pump controller uses solar energy as energy and is widely used in agricultural irrigation, animal husbandry, domestic water use, desert control and other occasions. In the process of energy conversion, we have been constantly trying to improve energy utilization efficiency. In addition, we use environmentally friendly and UV resistant materials in equipment production, which do not deform, discolor, or become brittle when used outdoors for a long time. Using high-quality products and services to promote agricultural development and contribute to a low-carbon future!

# SP100 Series Solar Pump Controller

## Strong——Strong adaptability

### Demand

- Solar power not sufficient to meet water demand
- High cost of diesel power generation

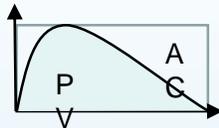

- Daily water flow can not meet the demand
- Can not support more panels in strings

- Controller far from the water pump, high output harmonic content
- Low groundwater level and deep well depth

- Constant pressure + MPPT

### Advantages

#### AC/DC intelligent complementary

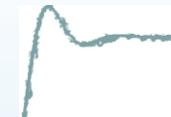

#### Standard DC 900V input

900V

#### Long distance

#### Solar PID constant pressure

### Value

- Solar power in priority, intelligent complementarity of AC energy
- AC/DC energy display

- More efficient PV panels configuration solutions
- Start earlier and shut down later

- Support motor cable length up to 200 meters without output reactor

- Built in PID function, achieving constant pressure water supply based on MPPT

# SP100 Series Solar Pump Controller

**Saving——Save cost and time**

Advantages

**Protection level IP66  
Anti-theft design**

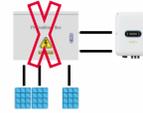

Value

- Direct outdoor installation without additional cabinets
- Fearless of sandstorm and rainstorm

**Built in DC switch**

- Users no need to install ACBs
- Power on and off devices more convenient and safe

**Built-in combiner box(Partial ratings)**

- Built in fuse and SPD
- Below 18.5kw no need combiner box
- Reduce user system costs

**Aviation plug terminal**

- No need to open the cover, more convenient wiring
- Reduce human risk

# SP100 Series Solar Pump Controller

## Smart——Smart IoT

### Advantages

- Built in multiple IoT solutions
- 4G+Bluetooth
- WIFI+Bluetooth
- Bluetooth

- Multilingual LCD screen display (English, French, Portuguese, Spanish)
- Multilingual large screen LCD display (under development)

- Parameter upload and download
- Quick debugging mode

- Timed start stop function

### Value

- Simplify APN settings, mobile phone updated settings
- Status monitoring
- Remote control
- Remote OTA

- Extremely simplified operation
- More comprehensive and clear display of device status information

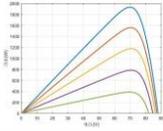

- Improve engineer debugging efficiency and reduce error risk

- Automatically run or stop according to the setting time, unattended.

# SP100 Series Solar Pump Controller

Stable——Stable quality and excellent performance

## Advantages

- MPPT efficiency  $\geq 99\%$
- MPPT rapid response and tracking

- Fully validated motor control algorithm

- High protection level design
- Industrial grade parts

- EU authoritative CE certification

## Value

- Greater water output
- Prevent water hammer effect and protect pipelines

- Stable performance
- Capable of driving PM motors, AM motors, single-phase motors, BLDC motors, etc

- Special design for solar water pumps
- Adapt to harsh outdoor environments such as high temperature, low temperature, wind, sand, and water vapor

- Stable and reliable

# GD170-PV Series Solar Pump Controller

## GD170-PV profile

- GD170-PV is the new generation of solar pump controller. It has compact structure and outstanding performance in one.
- The advanced MPPT function makes sure providing the most energy efficient operation of the pump, and rich protection functions ensure the smooth and safe operation.
- In summary, it provides a excellent balance of Easy Installation, Easy operation, Advanced pump-control capacity.

Compact and powerful

Advanced MPPT algorithms

Effective protection function

Remote monitor

# GD170-PV Series Solar Pump Controller

## Specification

### Type Selection

**GD170 - 5R5 - 4 - PV**  
①      ②      ③      ④

No.	Sign	Description	Remarks
①	GD170	Product abbreviation	GD170
②	5R5	Power range	5R5: 5.5kW
③	4	Voltage degree	4: AC 3PH 380V (-15%)-440(+10%)
④	PV	Industrial code	PV stands for solar pump.

### Product Specification

#### DC input

Max DC voltage(V)	800
Start voltage(V)	300
Min. work voltage(V)	250
Recommended MPPT voltage(V)	300~750
Recommended input work voltage(V)	550

#### AC input

Input voltage(Vac)	380V(-15%)-440(+10%)
Input frequency(Hz)	47~63

#### AC output

Output voltage(Vac)	0-input voltage
Output frequency(Hz)	0-400

#### Control performance

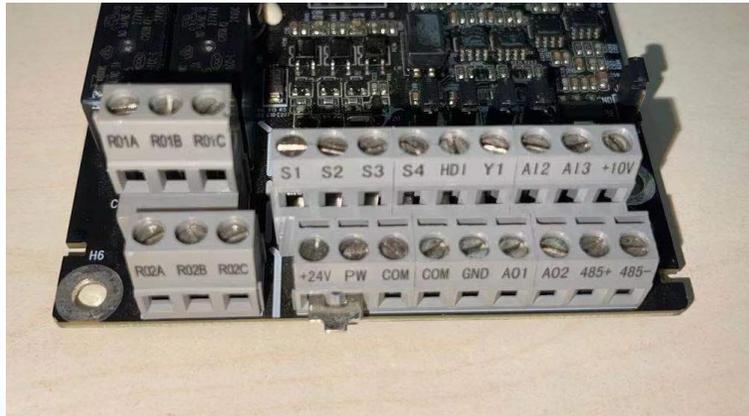

Motor type	Asynchronous and synchronous
Overload capability	120% of rated current: 1 minute 150% of rated current: 10 seconds

## PV input only

Solutions:

GD100-015G-4-PV

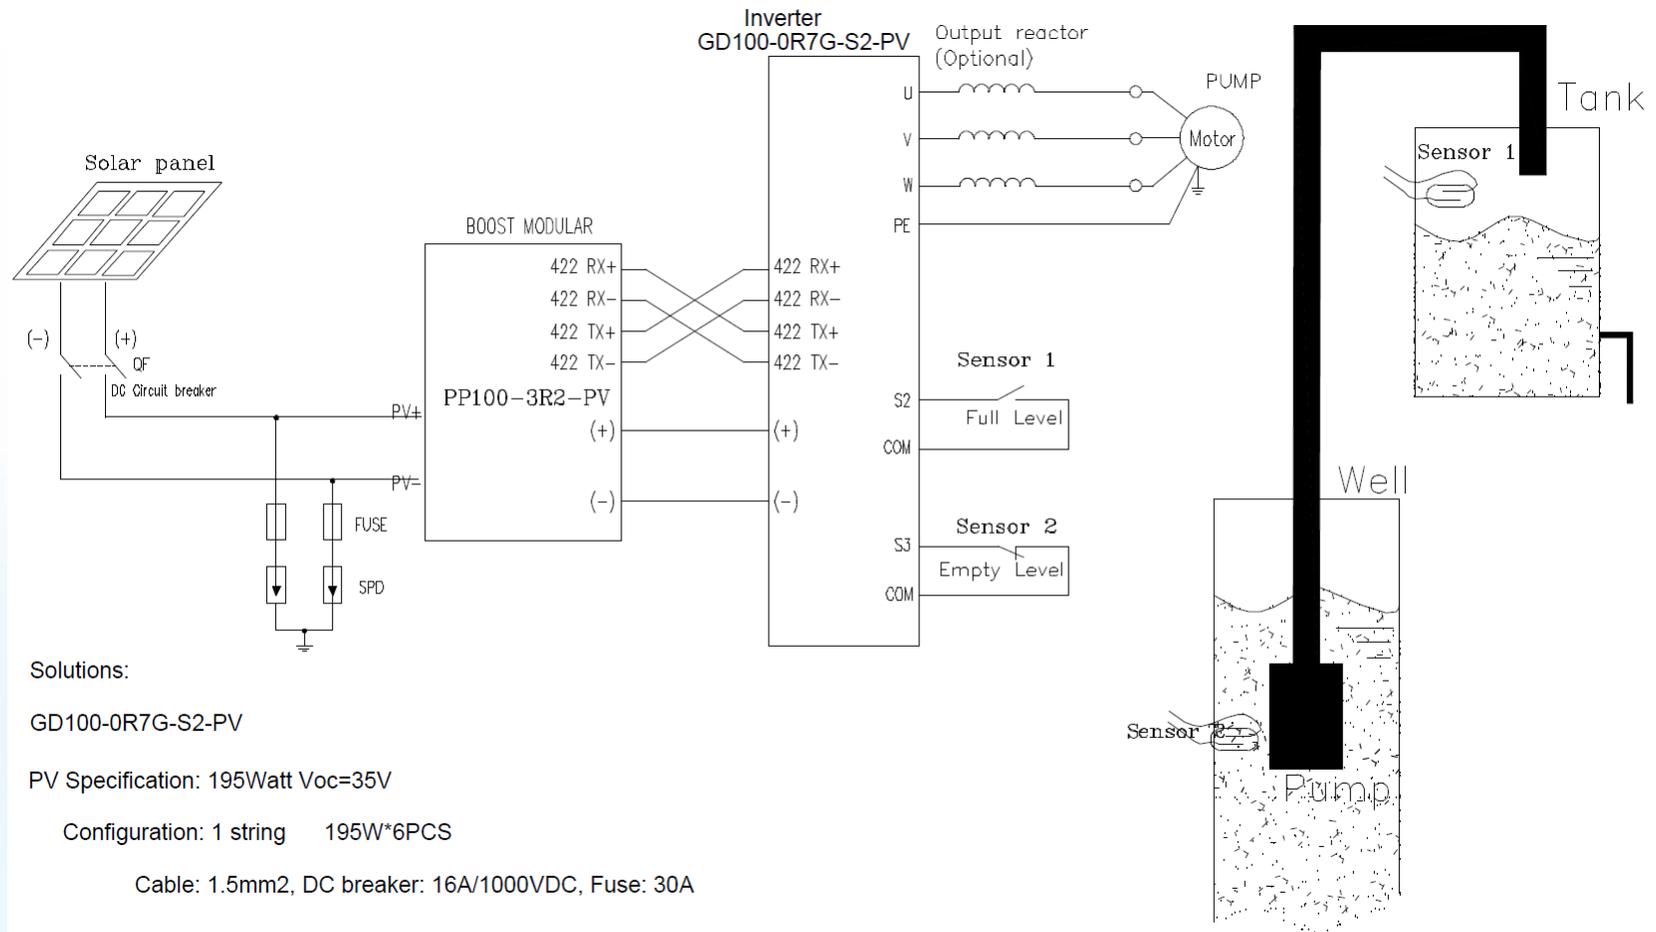

PV Specification: 330Watt Voc=45.95V

Configuration: 4 string \* 330W\*14PCS

Cable: 10mm<sup>2</sup>, DC breaker: 63A/1000VDC, Fuse: 30A

Note: If the distance between pump and inverter is more than 50m, the output reactor is recommended.

## PV input + Booster

Solutions:

GD100-0R7G-S2-PV

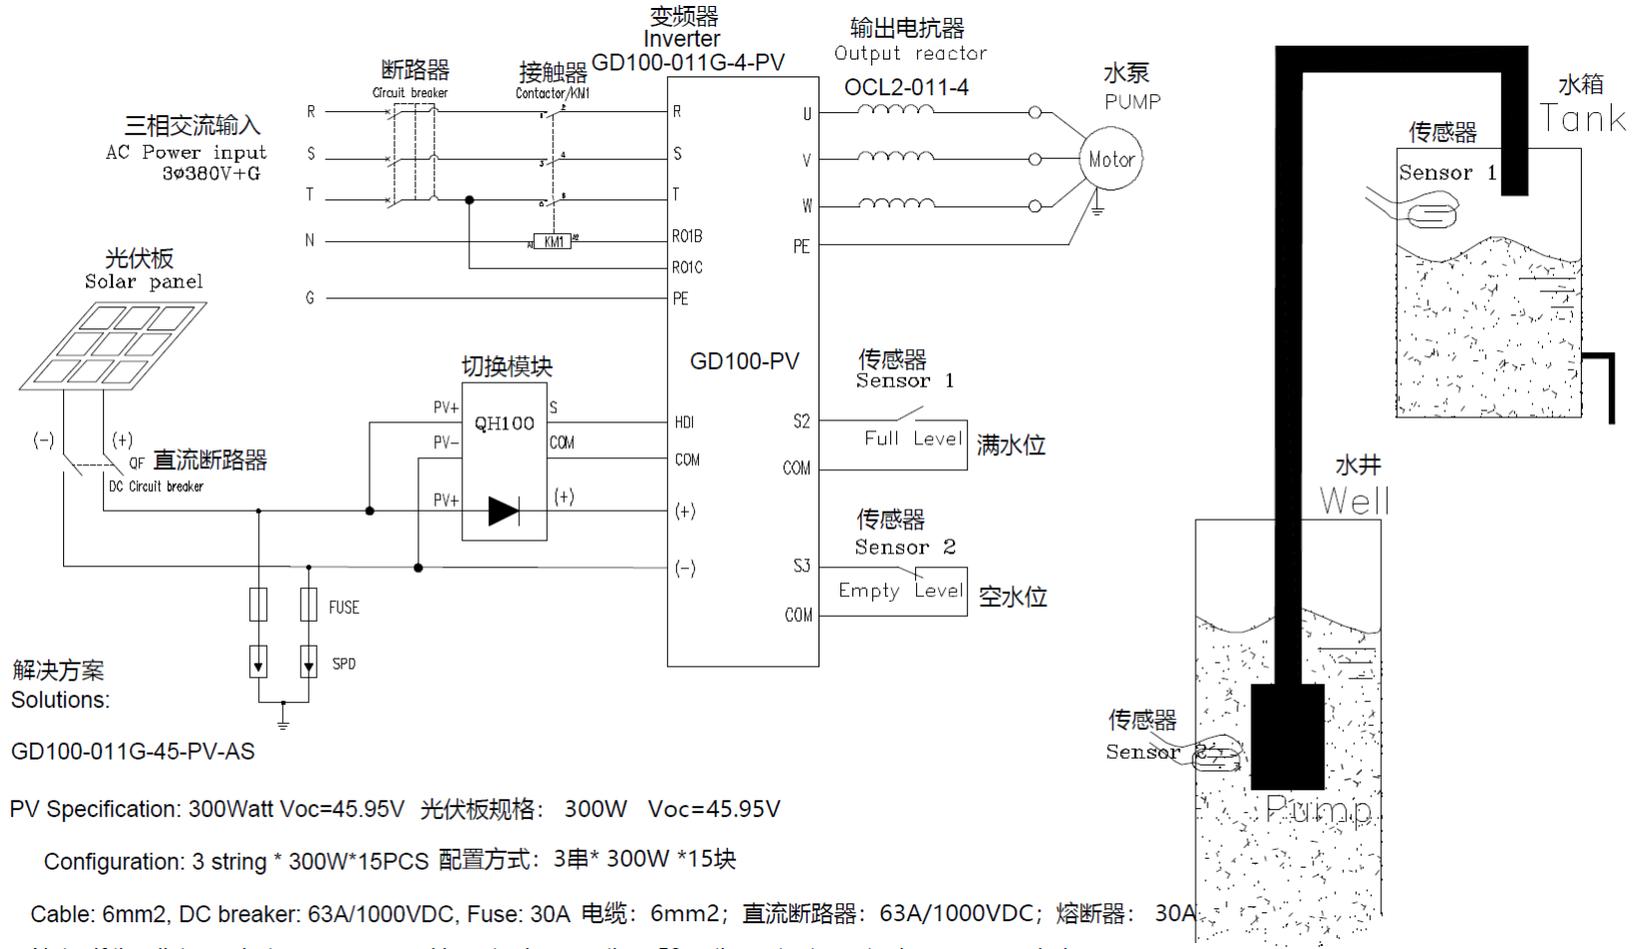

PV Specification: 195Watt Voc=35V

Configuration: 1 string 195W\*6PCS

Cable: 1.5mm<sup>2</sup>, DC breaker: 16A/1000VDC, Fuse: 30A

Note: If the distance between pump and inverter is more than 50m, the output reactor is recommended.

## PV + AC input + Auto switching

解决方案  
Solutions:

GD100-011G-45-PV-AS

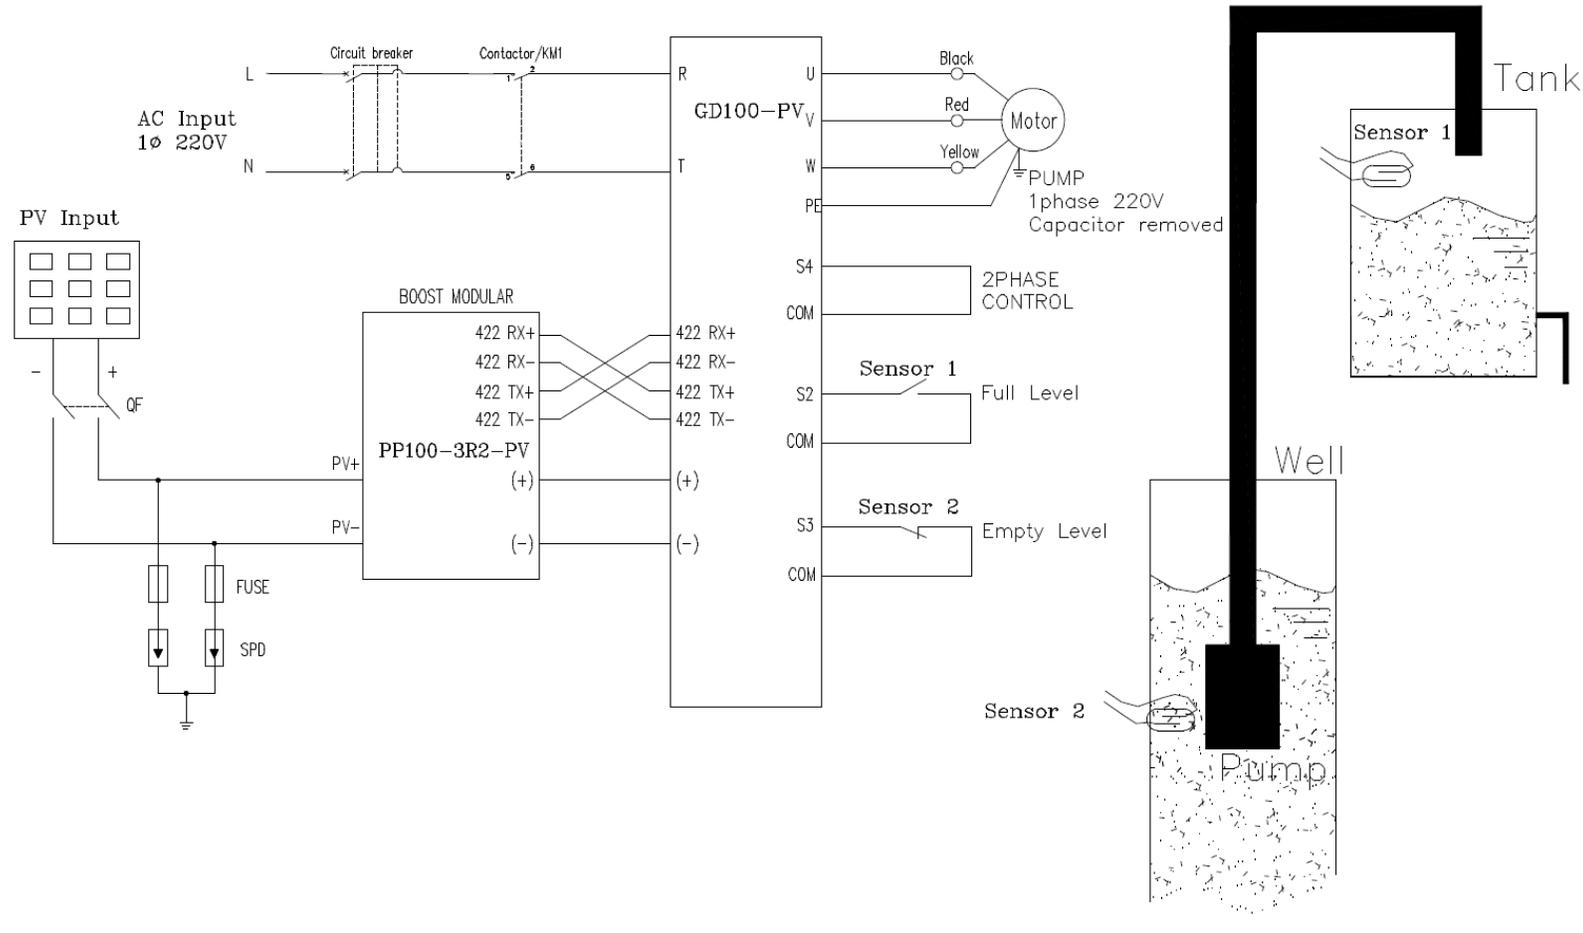

PV Specification: 300Watt Voc=45.95V 光伏板规格: 300W Voc=45.95V

Configuration: 3 string \* 300W\*15PCS 配置方式: 3串\* 300W \*15块

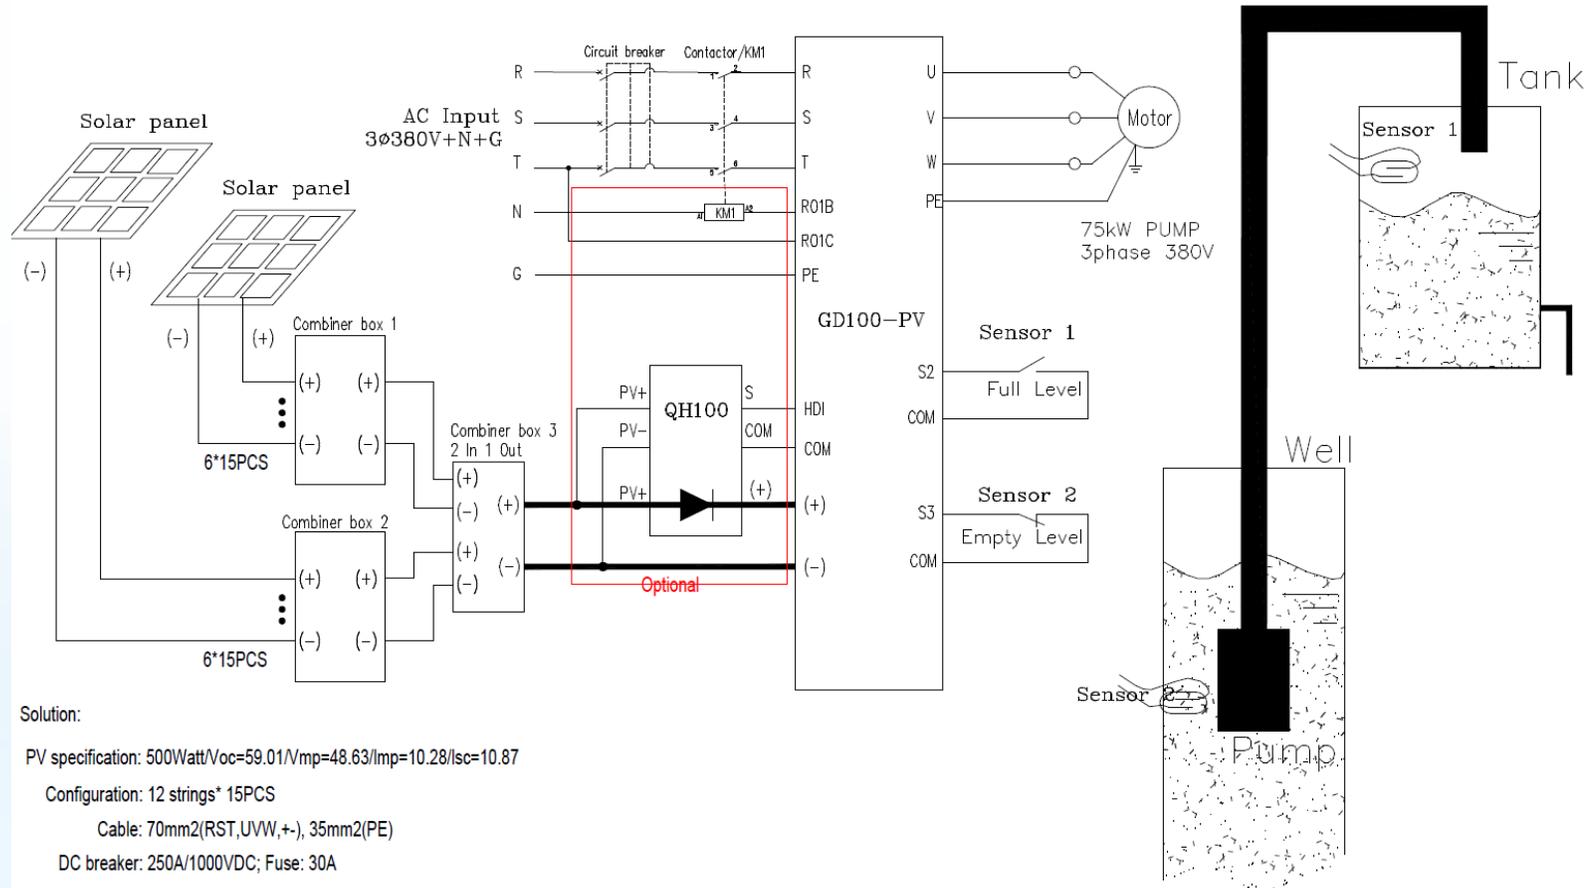

Cable: 6mm<sup>2</sup>, DC breaker: 63A/1000VDC, Fuse: 30A 电缆: 6mm<sup>2</sup>; 直流断路器: 63A/1000VDC; 熔断器: 30A

Note: If the distance between pump and inverter is more than 50m, the output reactor is recommended.

## PV + AC input + Booster + Single phase motor

## PV (Combiner box) + AC input + Auto switching

Solution:

PV specification: 500Watt/Voc=59.01/Vmp=48.63/Imp=10.28/lsc=10.87

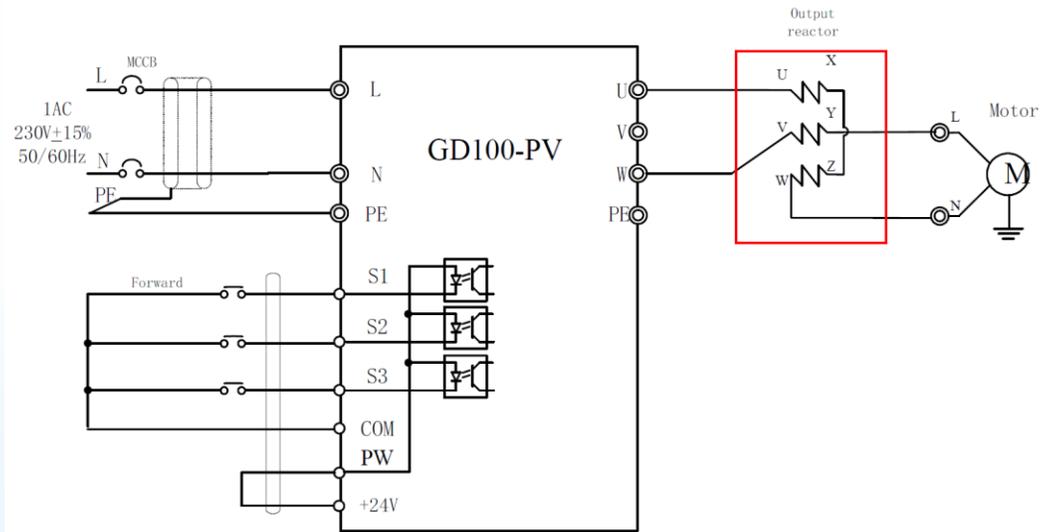

Configuration: 12 strings\* 15PCS

Cable: 70mm2(RST,U,V,W,+), 35mm2(PE)

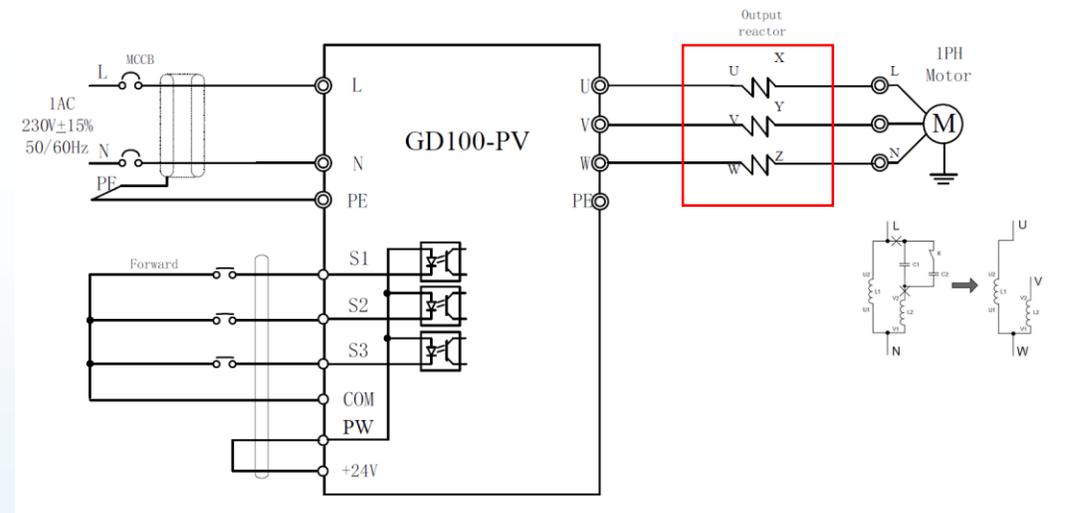

DC breaker: 250A/1000VDC; Fuse: 30A

Note: If the distance between pump and inverter is more than 50m, the output reactor is recommended.

## Single phase motor + Output reactor

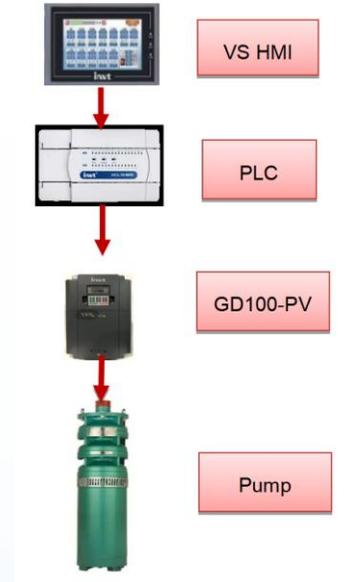

Motor with Capacitors

Motor without Capacitors

## Solar water distribution system

Product	Model No.	Qty
PLC	IVC1L-1614MAT	1
HMI	VS-070HE-1	1
VFD	GD100-1R5G-4-PV	1
Analogmodule	IVC1L-4AD	2

### Advantage:

- Automatically pump water meet the demand, and auto rectifier the hardness
- Friendly interface: HMI display the system status: pressure, flow, head, water level
- Modbus communciation, easy and fast to get the feedback singal.

A photograph of a modern building facade with a grid of light-colored panels. The building features large windows with green-tinted glass. The sky is a clear, bright blue. The INVT logo is prominently displayed on the upper left side of the building.

**FAQ**

## Rated parameters

- **U1 Max DC voltage:**  $U1 \leq$  DC bus capacitors working voltage
- **U2 Lowest working voltage:** SMPS starting voltage  $\leq U2 \leq$  Inverter start-up voltage
- **U3 Start-up voltage:**  $U3 > U2$   
 PV:  $U3 = U2 + 50$ ; BPD:  $U3 = U2 + 20$  (1.5~4kW 220V)/  $U3 = U2 + 40$  (2.2~5.5kW 380V)
- **U4 Recommended Voc:**  $U4$ ,  $U4(\min) = U3$ ,  $U4(\max) < U1$
- **U5 Recommended Vmpp:** DC bus voltage that inverter can run at 50Hz.

Model	-SS2	-S2	-2	- 4
AC input voltage(V)	220 (-15%)–240 (+10%) (1PH)		220(-15%)–240(+10%) (3PH)	380(-15%)–440(+10%) (3PH)
U1: Max DC voltage(V)		440		800
U3: Start-up voltage(V)		200		300
U2: Lowest working voltage(V)		150		250
U4: Recommended Voc (V)		200~400		300~750
U5: Recommended Vmpp(V)		330		550

## Controller rating and parts selection

- 1, Motor parameters (single phase motor 1.4 times)
- 2, Environment temperature, altitude
- 3, General parts: reactors, sine-wave filter
- 4, Booster module
- 5, IP degree
- 6, Remote monitor(GPRS)
- 7, Auto-switching

- -4: Panel pcs  $n_s \leq 21(37V)$ ,  $V_{oc} = 21 * 37 = 777V$
- -4: 400V capacitor used, 2 nos in serial.
- PV panels calculation:

$$n = P_m / \eta_m / \eta_{VFD} / \eta_{PV} / P_0$$

$$n_p = \text{roundup}(n / n_s)$$

$P_m$ : Motor power

$\eta_m$ : Motor Effi

$\eta_{VFD}$ : VFDeffi

$\eta_{PV}$ : Matrixeffi

$P_0$ : Panel power

$n_p$ : Strings

$n_s$ : Pcs / string

Note:

$$1 / \eta_m / \eta_{VFD} / \eta_{PV} = 1.2$$

## PV panel configuration

- Example: GD100-015G-4-PV Panel spec: Pmax=250W Voc=37V,  $1 / \eta_m / \eta_{VFD} / \eta_{PV} = 1.2$

$$n = P_m / \eta_m / \eta_{VFD} / \eta_{PV} / P_0$$

After calculation: n=72

$$n_p = \text{roundup}(n / n_s)$$

After calculation :

$$n_p = \text{roundup}(72 / 21) = 4$$

$$n_s = 72 / 4 = 18$$

## Max DC input current calculation

$$I_{DC,AVG,n} = P_M / \eta_M / \eta_{VFD} / V_{bus}$$

$$I_{DC,max} = I_{DC,AVG,n} \times K_1$$

### DC breaker calculation:

$$I_{DC,Switch} = I_{DC,AVG,n} \times K_2$$

Protection diode selection can refer to the index of

$I_{DC,Switch}$

$P_m$ : Motorpower

$\eta_m$ : MotorEffi

$\eta_{VFD}$ : VFDeffi

$V_{bus}$ : RatedDCbusVoltage

$I_{DC,max}$ : MaxInputDCcurr

$I_{DC,AVG,n}$ : RatedDCbusCurr

$K_1$ : OLcoeffi = 1.1

$K_2$ : SeleccionMargin = 1.2

## Max DC input current calculation

- **Example: GD100-022G-4-PV DC breaker and protection diode**

$$I_{DC,AVG,n} = 22000 / 0.905 / 0.95 / 540 = 47.4A$$

$$I_{DC,max} = 47.4 \times 1.1 = 52.1A$$

$$I_{DC,Switch} = 47.4 \times 1.2 = 56.9A$$

※In manual  $I_{DC,max} = 60A$  , roundup applied.

※DC breaker can select 63A, voltage 1000VDC

※Protection diode should be  $\geq 56.9A$ , can select 100A, 110A

**Notes:**

Diode spec: 25/35/100/110/160/150/200 (56/57/90/95/207/248)

Breaker spec: 50/63/100/125/160/225/250 (38/40/65/80)

## Diesel generator power supply

Pay attention: need to wait for the diesel generator to run stably before connecting to the inverter, otherwise it may burn out the inverter.

## Diesel generator/AC grid + PV

### A) Booster module

PV connected to the booster module and AC connected to the GD100-PV, PV and AC didn't work at the same time.

Booster module output 350/570VDC, it's bigger than the DC voltage that converter from AC( $380 \times 1.414 = 537V$ )

### B) Switching module

AC is controlled by the contactor, when contactor acted, PV and AC power work at the same time.

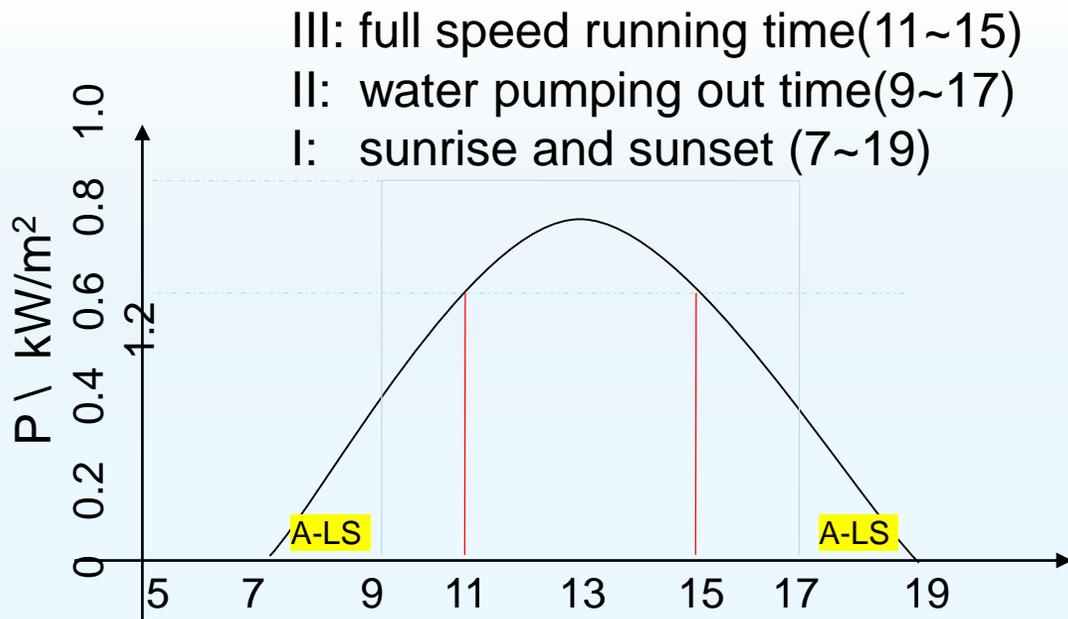

### C) Manually power on AC

Need to power on at the same time or power on the  $\text{Max}(PV_{DC}, AC_{DC})$  first. Otherwise there is risk to damage the inverter. (Don't power on AC during running).

## No water or less water pumping out

### Cause analysis and solutions:

- 1, **Reverse running**: test by changing the running direction of motor;
- 2, **Motor block or parameter setting wrong**: check the parameter setting, especially check the motor parameters;
- 3, **Input power not enough**: According to the law of conservation of energy, the loss of inverter is about 4%, and the rest is output to the motor. If there is no water or the water is less, it can only indicate that the input power is not enough and more PV panels need to be configured.

### Pump motor power calculation:

1, Pump shaft power:  $P_{\text{shaft}} = Q \cdot H / 102 / \eta$

Q: Flow, L/s     H: Head, m

2, Motor power:  $P_{\text{motor}} = K \cdot P_{\text{shaft}}$

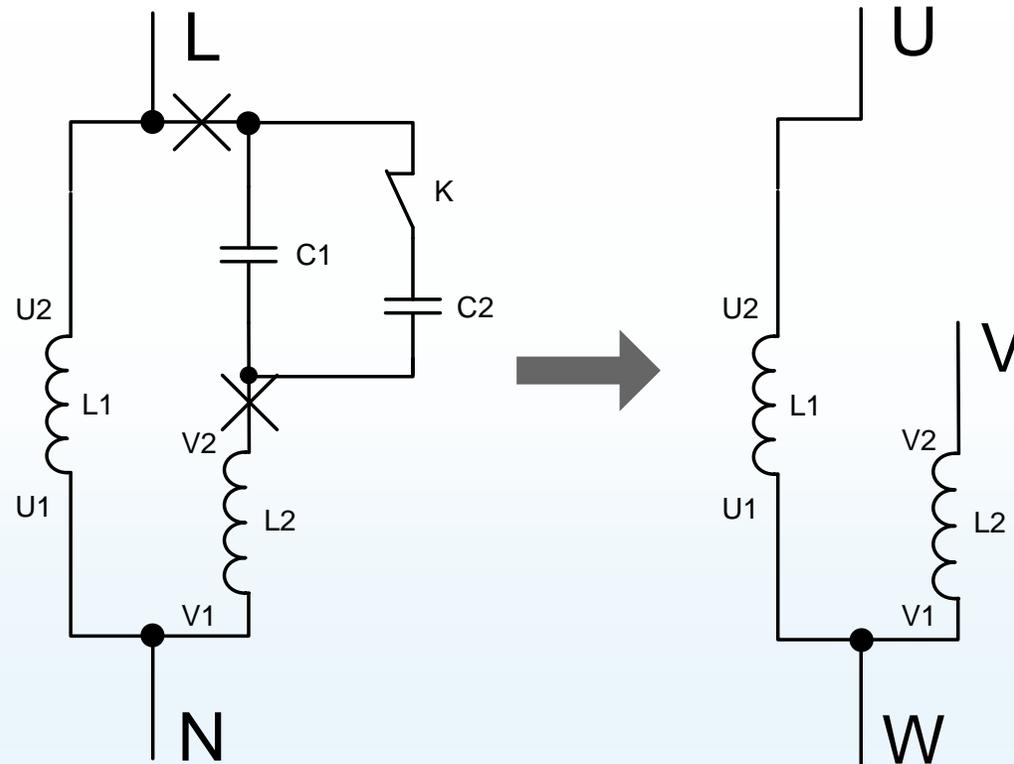

K: Backup coeffi:  $P_{\text{shaft}} = 2 \sim 5 \text{ kW}$ ,  $K = 1.5 \sim 1.3$

$P_{\text{shaft}} = 5 \sim 10 \text{ kW}$ ,  $K = 1.3 \sim 1.25$

## Relationship: Power, flow, Head

Pump Specification		PV input			Running status				
		DC voltage (V)	DC current (A)	DC power (kW)	Frequency (Hz)	Current Flow	Current Head	Current power	Efficiency
Rated flow	200			0	10	40	2	0.032	
Rated head	50			0	20	80	8	0.256	
Rated RPM	2880			0	30	120	18	0.864	
Rated Hz	50			0	40	160	32	2.048	
Rated power	4			0	50	200	50	4	

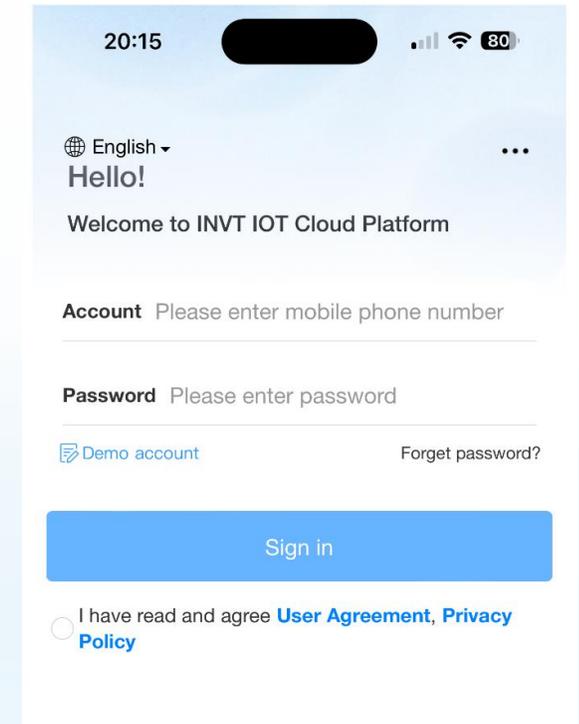

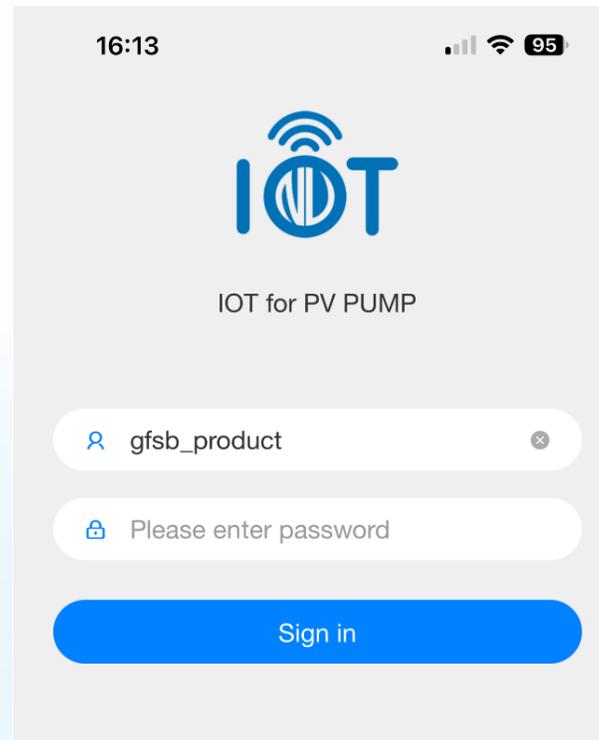

Single phase motor(capacitors removed)

- Starting windings L2, Running windings L1,  $R_{L2} > R_{L1}$
- Starting capacitor C2, Running capacitor C1,  $C2 > C1$ , eg: C1=20uF, C2=350uF

## IoT module application

- APN: Need to provide SIM card APN.
- Indian Server:

**APP: INVT IOT**
- User ID: Contact the service engineer

## Commissioning steps

- Press JOG get into manual operation(REMOTE LED is off).
  1. Restore all parameters first, P00.18=1
  2. Set motor parameters: P02.01~P02.05(AM); P02.15~P02.23(PM)
  3. Test the motor running direction, if reverse just need to exchange UW cable.
  4. Set functions like: Lower limit, A-LS, A-LL, auto-switching, etc
    - Lower limit: P15.05 (min frequency that water pumping out)
    - Water level control: P15.11~P15.18
    - Low-load protection: P15.19~P15.22
    - Low sunshine protection: P15.23~P15.24
    - Auto-switching: P15.32~P15.34
  5. Press RUN to run pump, monitor the output frequency, adjust KP, KI, if fluctuation
